Surat, Gujarat, IN

EDUCATION

Gujarat Technological University, India

Bachelor of Engineering in Computer Engineering

August 2018 – May 2022

GPA: 9.27/10

TECHNICAL SKILLS

Languages: JavaScript, Typescript, HTML, CSS

Framework: React.js, Node.js, React Native, Postman, Bootstrap, i18Next **Lib:** Storybook, react-pdf, eCharts, jest, Redux, Three.js, ESLint, Material UI, Ant Design, Vite, Bull, socket.io, jwt.io **Database:** MongoDB, Firebase, influxDB

DevOps/Cloud/Tech: GitHub, Figma, Docker, Azure, Linux, Windows, Jenkins, CI/CD

EXPERIENCE

Senior Software Developer | WebOsmotic Private Limited | India

January 2022 – April 2025

- Engineered RESTful APIs using javascript and Node.js, enhancing backend functionality, reducing response time by 20%
- Built reusable React.js components using storybook, utilizing Redux and Hooks for efficient state management
- Conducted QA testing by end-to-end testing pipelines using Cypress and jest, reducing production defect rates by 30%
- Applied CI/CD pipeline using jenkins, automating build, test, debug, deployment to faster and reliable releases
- Collaborated in Agile team, applied SDLC principle to ensure on-time delivery of robust, high-quality software solution

Junior Software Developer | iGeek | India

April 2021 – November 2021

- Constructed Invoice Management system using React.JS, Node.JS, performed CRUD with RESTful API calls, pagination, generating invoices, subscription using stripe APIs
- Utilized Figma for UI/UX design and React.js for dynamic frontend components, enhancing user experience
- Managed 100 number of tables using NoSQL based database MongoDB, resulting in 50% less in manual data entry
- Deployed backend on GCP using Docker and jenkins, 30% boost in deployment and compatibility
- Learned Agile methodology, collaborative work, and established a streamlined CI/CD pipeline with GitLab, Jenkins

Web Developer Intern | The Sparks Foundation | India

April 2021 – May 2021

- Developed a POS app featuring the product details, customer details, invoicing using React Native, MongoDB, influxDB
- Applied JWT token based authentication for user authentication using Javascript code
- Deployed Stripe API to enhance payment-based services, and XML layout design for frontend with Figma
- Employed jest framework for unit testing, Improved project efficiency by 10%, and maintain timelines by scrum

PROJECTS

Coables - Online Therapy Platform

- Built booking flow, therapist filtering and dashboard UI using React, Typescript and Material UI, improving overall task completion rate by 40%.
- Integrated VideoSDK for secure, real-time video calls and Razorpay for seamless online payments
- Leveraged eCharts for data analysis visualization, ensuring 97% accuracy in entire distributed dataset analysis

Online POS System

- Developed POS modules for product management, subscription and invoicing using React, Node.js and MongoDB
- Integrated Stripe APIs to support one-time and recurring payments, processing 500+ transaction to send monthly summary report using Bull job manager
- Implemented JWT authentication, and built a role based dashboard for merchants, reducing manual billing time by 50%
- Integrated i18Next for multiple languages support and socket.io websocket for real time communication

React Storybook Design System

- Created 20+ reusable UI components using React, SCSS and Typescript, documented via Storybook
- Achieved 100% unit and snapshot test coverage using jest and React Testing Library, ensuring stability across all use cases
- Enforced strict Typescript rules, accessibility guidelines (ARIA, WCGA, keyboard Nav), and ESLint rules, improving code consistency and developer onboarding
